Shopro E-Commerce App: Comprehensive Report

Overview

Shopro is a sophisticated e-commerce application developed using Flutter. It provides a smooth and interactive shopping experience with features like product listing, detailed product views, cart management, and efficient state management using Riverpod.

Project Structure

- lib/: The main source code directory.
 - o components/: Contains reusable UI components.
 - custom_button.dart: Defines a customizable button widget.
 - product_category_tile.dart: Widget for displaying product categories on the home screen.
 - constants/: Centralized file for shared constants.
 - constants.dart: Stores common text styles, colors, and padding values to ensure consistency across the app.
 - models/: Contains data models.
 - data_model.dart: Defines the data structure for products and reviews.
 - providers/: Contains state management logic.
 - cart_provider.dart: Manages the cart state and actions (e.g., adding/removing products).
 - product_list_provider.dart: Fetches and manages the list of products.
 - o screens/: Contains different screens of the app.
 - cart_screen.dart: Displays the user's cart and allows product removal.
 - home_screen.dart: Shows the product categories and a list of products.
 - product_description.dart: Provides detailed information about a selected product.
 - o main.dart: The entry point of the application.

Features

- **Product Listing**: A comprehensive list of products displayed with images, prices, and ratings.
- Product Details: Detailed information including price, description, stock status, and reviews.
- Search Functionality: Users can search for products using a search bar.
- Cart Management: Users can add or remove products from their cart.
- Category Browsing: Horizontal scrollable list to view products by category.
- State Management: Utilizes Riverpod for efficient state management.

Dependencies

- Flutter: The framework used for building the UI.
- Riverpod: State management solution to handle the app's state efficiently.

Installation & Setup

Clone the Repository

bash

Copy code

git clone https://qithub.com/yourusername/shopro.git

Navigate to the Project Directory

bash

Copy code

cd shopro

Install Dependencies

bash

Copy code

flutter pub get

Run the Application

bash

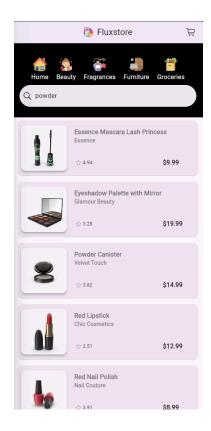

Copy code

flutter run

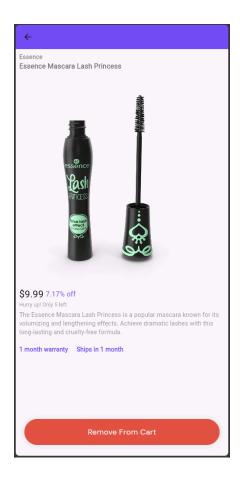

Development Guidelines

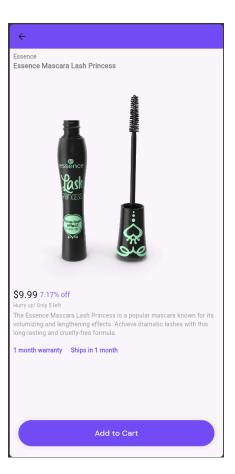

- **Adding Features**: Create new Dart files in the appropriate directory and update relevant provider or state management logic.
- **Updating UI**: Modify widgets in the components and screens directories and use constants from constants/constants.dart.
